AI Pilot Readiness Assessment

FICTIONAL EXAMPLE - not real business evidence

Fictional long note boundary test

Assessment date: 2026-10-26

Business process: Synthetic process for adversarial case 22

Intended outcome: Assess a proposed expansion; all records are invented

Internal reference: AD-22

Executive summary

READY FOR HUMAN REVIEW

Rule-based interpretation: All checks are recorded as met; a responsible person must still validate the evidence and approve any expansion.

Evidence status: all answers and notes below are user-reported. None has been independently verified. Completing the questionnaire is not a validated business case.

Human approval is required. Do not expand on the strength of this report. A responsible person must inspect the supporting records and make the decision. A limited result does not authorise continued piloting without its own approvals.

Essential blockers

None recorded. This reflects the supplied answers, not verification of the safeguards.

Other outstanding evidence gaps

No other gaps recorded. The supporting records still need independent review.

Recommended next checks

Business outcome: Agree an outcome and success threshold with the sponsor; inspect the trial brief.

Baseline for comparison: Record a comparable baseline and check how the pilot results differ.

Representative testing: Inspect a representative test log, including difficult cases and failures.

Quality and error review: Arrange a named quality reviewer and inspect the error log and unresolved risks.

Workflow owner: Confirm the accountable workflow owner and their recorded acceptance.

Human oversight: Walk through approval points and exceptions with the responsible reviewer.

Data permission and controls: Check data permission, approved tool use, access and retention with the appropriate owner.

Stop or rollback arrangements: Inspect the stop procedure and test a safe return to the previous process.

Training and support: Check user instructions, training needs and the available support route.

Monitoring and review: Agree ongoing measures, review thresholds, a review owner and a review date.

Human owner: verify the records, resolve contradictions, confirm permissions and decide whether further testing, a stop or an expansion proposal is appropriate. Record the decision separately.

All ten criteria: user-reported record

1. Business outcome

Is there an agreed business outcome and a success threshold?

Reported response: YES

Evidence note (user-reported, unverified):

Fictional tested evidence reference with recorded limits and results. Fictional tested evidence reference with recorded limits and results. Methodology and limitations

This project uses ten conditions and five essential gates: quality review, workflow ownership, human oversight, data permission and rollback. A No or Unknown on any essential gate means DO NOT EXPAND. If these gates are Yes but another condition is No or Unknown, the result is LIMITED PILOT ONLY. Only ten Yes responses with notes produce READY FOR HUMAN REVIEW. These are the existing Python rules, not a validated vendor standard.

All answers and notes are user-reported and have not been independently verified. Note length and word counts check form only, not truth, relevance, sufficiency or contradictions. This tool does not establish compliance, security, financial benefit or a validated business case. No vendor designed, validated or endorsed it. Human approval is required before expansion; a limited result does not permit a pilot to continue without its own approvals.

The browser requires Yes notes to contain at least 40 characters, 6 words and 4 different words. This is a form check only. The original Python checker requires a non-empty note. Both use the same decisions for records accepted by the browser. No maturity score or confidence percentage is calculated.

Privacy: answers are processed in page memory. The application does not upload them or write them to browser storage. Downloaded reports and JSON files remain on your device and must be handled under your organisation's rules.
